

The learning creation, organization, and publishing solution for educators.

Elearis® is a cloud-based solution that enables educators to create, manage, and publish LMS, online, and smartphone/tablet App-based learning.

Elearis® enables educators to drag and drop all types of media files and learning content to create courses, lessons and student supplemental materials for learning. Elearis® provides private and shareable cloud-based storage and organization tools. Learning content can be reused in multiple courses and lessons at any time.

CREATION

ORGANIZATION

PLANNING

PUBLISHING

Elearis® enables the educator to visually organize and plan lessons and courses. Educators can add videos, audios, documents, pdfs, images, and even advanced HTML5/SCORM learning packages to courses and lessons.

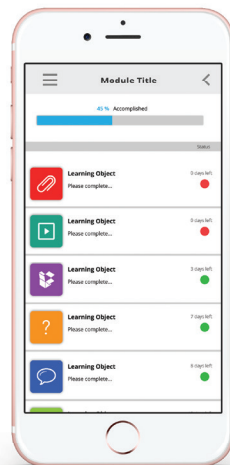

Educators can add web links to external web content, build online assessments, add “live” lecture sessions and discussions. At any time, educators can visually rearrange, add, remove, and reuse all of the content.

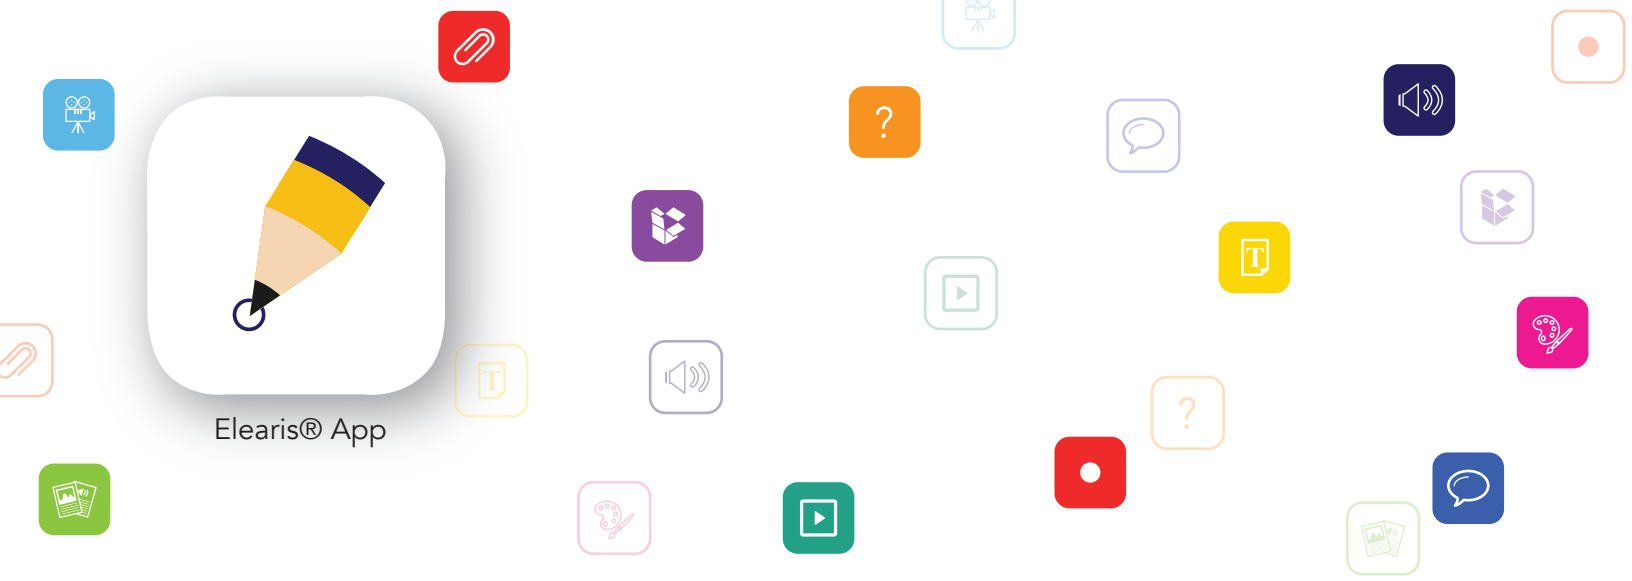

The learning content can then be published to all leading learning management systems, to the web, and to smartphone and tablet Apps in the

iOS and Google Play store for immediately use by students.

Students can access courses, lessons, and supplemental materials through learning management systems, directly online through a student portal, and through downloadable custom Apps from the Apple iOS and Google Play stores.

All of the students progress and results are constantly tracked by Elearis® and reported back to the learning management and student information systems. Students can use the learning content online or offline via the Apps.

Elearis® App

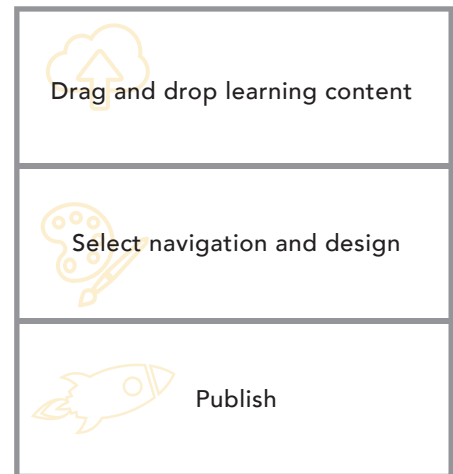

Educators can add, change, reorganize, and delete any content immediately.

Educators save time in preparing student learning materials and can now publish immediately to a wide range of mobile devices. Elearis® provides a completely customizable mobile user experience for students.

Organizations can provide one or many unique user experience and navigational designs for use by educators. This provides the organization with the ability to maintain a consistent look and feel of courses and lessons while still providing a wide variety of choices to educators.

Feature List

- Simple user interface for creating online content
- Mobile publishing with disconnected capabilities to unlimited number of students
- Seamless integration with all major LMS platforms
- Ability to make real time changes to existing courses and course materials
- Reusability of entire courses and individual learning content
- Custom online web and mobile app designs
- Technical support and training
- Secure cloud-powered solutions backed by AWS
- Robust data analysis and content metrics for learning objects
